### Classification:

Restricted — BD Only

### Date:

March 2026

## OVERVIEW

Unykorn delivers a production-ready digital capital markets stack enabling registered broker-dealers to originate, structure, and distribute tokenized real-world assets across multiple blockchain settlement layers. The platform sits beneath a broker-dealer's supervisory framework — every workflow is configurable to the sponsoring firm's compliance standards.

Core capabilities include multi-chain contract authoring across XRP Ledger, EVM chains, Stellar, Avalanche, Tron, Polygon, and Base; stablecoin settlement via USDC, USDT, and proprietary USDF rails; investor onboarding automation with accreditation logic; real-time audit trail capture; and post-close reporting. Custody integrations connect to four institutional custodians with segregated account structures.

Broker-dealer partners retain full supervisory authority. Unykorn provides the technical execution layer only — no client relationships, no AUM discretion, no dealer activity. The platform is designed to be invisible to end investors: your issuance infrastructure, white-label ready, with branding, documents, and communications controlled by the sponsoring firm.

## PARTNER IMPLEMENTATION CHECKLIST

- 1 Review platform architecture deck with internal IT and compliance
- 2 Map current issuance workflow to UnyKorn module set
- 3 Identify target chains and settlement rails by program type
- 4 Confirm custody provider integration requirements
- 5 Schedule technical demo with the UnyKorn engineering team
- 6 Execute mutual NDA and platform access agreement
- 7 Begin sandbox configuration in the test environment
