March 2026

OVERVIEW

The UnyKorn multi-chain registry enables a single offering to be represented simultaneously across multiple blockchain settlement layers. A canonical registry maintained by the platform maps each investor's position to their chain allocation and maintains real-time reconciliation across all active chains.

Supported settlement chains: XRP Ledger (institutional and cross-border primary), Ethereum Mainnet and Polygon (EVM and DeFi composability), Avalanche C-Chain, Base, Tron (Asian distribution), Stellar (Reg S offshore programs), and Apostle Chain (AI-agent-to-AI-agent settlement and proprietary programs). Additional chains can be integrated on a custom basis.

The registry architecture separates the legal record of ownership from on-chain settlement representations. Legal ownership is maintained in the platform's off-chain ledger with full legal enforceability documentation. On-chain token holdings are settlement instruments. The platform's ledger is the authoritative source; chain representations are operationally efficient but do not override the legal record.

PARTNER IMPLEMENTATION CHECKLIST

- 1 Select primary chain for offering base registration
- 2 Determine secondary chains for distribution and liquidity
- 3 Confirm investor wallet requirements per chain
- 4 Test multi-chain reconciliation in sandbox environment
- 5 Establish off-chain legal record and on-chain mapping
- 6 Document chain election in offering mechanics
- 7 Set up monitoring for cross-chain position reconciliation
